Software Engineer

SUMMARY

Versatile Software Engineer with a focus on full-stack development and complex system architecture. I specialize in translating ambiguous business requirements into robust, scalable technical solutions—from decentralized healthcare systems to high-performance e-commerce platforms. Adept at managing the full software development lifecycle, I combine a strong foundation in data structures and algorithms with academic rigor and hands-on experience in building feature-rich applications. Committed to writing clean, maintainable code that delivers measurable business impact and enhances user accessibility.

EDUCATION

Dr. A.P.J. Abdul Kalam Technical University |

Bachelor of Technology in Computer Science and Engineering

SGPA: 7.01/10.0

Lucknow, Uttar Pradesh

2023 -2027

TECHNICAL SKILLS

* **Languages:** C++, Python, JavaScript, Solidity, SQL

* **Frameworks & Libraries:** React.js, Node.js, Express.js, TensorFlow, PyTorch, OpenCV, MediaPipe, FAISS

* **Databases & Tools:** MySQL, MongoDB, IPFS, RESTful APIs, Git, Docker

PROJECTS

Health-AI | Python, TensorFlow, Federated Learning, REST, WebSockets

Link: <https://github.com/garv2214/Health-AI>

- Designed a multi-model ensemble (Random Forest, XGBoost, Neural Networks) to deliver high-accuracy risk stratification and medical emergency prediction.
- Engineered a decentralized federated learning pipeline, enabling secure AI model training across distributed nodes while maintaining HIPAA/GDPR compliance.
- Integrated real-time AI agents with IoT medical sensors via RESTful APIs and WebSockets to facilitate proactive health monitoring.

Visual Search - SearchLens | Python, TensorFlow, ResNet-50, FAISS, React.js

Link: <https://github.com/garv2214/VISUALSEARCH>

- Developed SearchLens, an AI-powered visual search engine leveraging ResNet-50 CNN architecture for complex image feature extraction.
- Optimized system performance for sub-200ms query response times by implementing the FAISS indexing algorithm for efficient similarity detection.
- Engineered a seamless user experience with a React-based frontend, achieving 92% accuracy in visual similarity detection.

CareVault - Decentralized Health Record System | React.js, Solidity, IPFS, Node.js

Link: <https://github.com/garv2214/CareVault>

- Architected a decentralized healthcare record system using React.js for the frontend and Solidity with IPFS for secure, decentralized data storage.
- Engineered an end-to-end data pipeline using Node.js and Web3.js to bridge patient-facing interfaces with blockchain-based backend infrastructure.
- Optimized data structures for inventory management, ensuring high performance under concurrent user load.
